Chapter 1: The Sun

The Sun is a star at the centre of our solar system. It gives us light and heat. Without the Sun there would be no life on Earth. The Sun is so big that more than one million Earths could fit inside it.

Chapter 2: The Planets

There are eight planets in our solar system: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune.
Mercury is the closest planet to the Sun. Jupiter is the biggest planet. Saturn has beautiful rings made of ice and rock.

Chapter 3: Earth and the Moon

Earth is the only planet known to have life. It takes 365 days for Earth to go around the Sun. The Moon goes around the Earth and takes about 27 days. The Moon does not make its own light; it reflects light from the Sun.

Chapter 4: Stars and Space

At night we can see thousands of stars. Stars are giant balls of burning gas. Astronauts travel in rockets to explore space. India’s ISRO sent Chandrayaan to the Moon.
